TEST REPORT - 24067

Entry Date: Monday, December 31, 2018

Pull Off Adhesion IAW ASTM D4541 (2017), Method E, Type 4.

See attached photos.

Part and Test Information

Test Result

Observations: ASTM D4541 testing was performed on samples consisting of BaseCrete Waterproofing bondcoat applied to brick, and with two types (blue and white) of swimming pool plaster applied over BaseCrete/brick. In all cases of attempting to perform pull off adhesion on the swimming pool plaster, the dollies broke off during the engagement of the pull off tester. The pull offs on the BaseCrete Waterproofing bondcoat only material averaged ~ 200 psi.

Please see the photos of the dollies and the pull off "plugs" Based on these results, it is our opinion that the Basecrete Waterproofing bondcoat has better cohesive characteristics and bond strength than either of the swimming pool plasters.
